

Scientific capacity building in biomedical research through scientific exchange and co-development of research services

## SMART CROSS-BORDER REGION

The cross-border region between the capital cities of Vienna and Bratislava is characterized by a high number of universities and research institutes. However, few of these institutes have a strong international reputation in the biomedical sciences, and there is still a low level of knowledge-intensive services. With this project, we will respond to both challenges by bringing international scientists to the cross-border region, increasing training opportunities, and developing new expertise and a new knowledge-intensive research service platform in the production of biomedically relevant biomolecules important for virology research.

Project budget:

**EUR 571.016,72**

EFRD funding:

**EUR 485.364,21**

Project duration:

**07/2018 – 06/2021**
